

# ASSET MANAGEMENT MOBILE ASSET ENQUIRIES

## Enquire on comprehensive asset, work and defect history on mobile devices

- Show asset and work details nearby based on GPS location
- Enquire on all assets details
- Enquire on all defects on all assets
- Enquire on all work orders on all assets
- Enquire on all maintenance schedules and inspection results on all assets

## Key Features and benefits

### Query Assets

Asset Enquiries provides multiple options to query asset data in the field. It allows field users to perform enquiries on assets independent of the work orders assigned to them on the mobile device. Data includes the details of assets, defects, work orders and maintenance schedules. Defects and work orders of all statuses are available allowing field users to query currently outstanding work or all historical work. This can be particularly useful when working on a particular asset or work order and needing to know what has happened to this asset previously.

### Track maintenance

Maintenance schedule details are available comprising next due maintenance as well as history. This includes all test points or inspections results.

### Flexible work mode

All data is available in either an online mode or offline mode.

### Locate nearby assets

Asset Enquiries includes a powerful Near Me facility to show all asset and work information near the user based on current GPS location.
